

Keeping Your Air Purifier running smoothly ...

Use a single Surge Protector

... rated 900 to 1100 Joules for your Classic, Breeze,
pureAir3000 & Fresh Air Purifiers
(< 700 joules for the Flair, EcoBox & PA1500 air units)

Ace Hardware ... 866-290-5334 ... & other places

These days with so much wifi and manmade electro-magnetic fields, our homes electricity is prone to power surges & spikes. This “dirty electricity” is hard on our electronics & appliances and for people, may cause stress, dehydration & premature aging.

Even if you have a whole-house surge protector, this single surge protector will help minimize the amount of power hitting your air unit. We use one of these on other appliances too ~ like the fridge, garage door opener, convection oven, heaters, etc...

Another thing that affects these units and our home’s electricity flow is a power meter that uses wifi (Smart Meter) also dirty electricity. You can help your home or building’s electricity flow more efficiently, effectively and economically with a special copper ring

by LightLife Technology. Find out more at

<https://airwaterandwellness.com/energy/>

We currently have these in stock too.

We carry the two sizes of these single surge protectors ... or you can pick one up at your local hardware or home building goods store. (call first).

If your air unit has not been cleaned or serviced in awhile, we are still doing that.

Enjoy the clean & fresh air that this technology provides for you indoors.
