

## Premium 10-Stage Water Filtration System

Tired of bottled water? Ready for something fresher, healthier, easier on the environment & more available?

- Top quality water filter - reliable & affordable
- Addresses consumers' water taste & safety needs
- Tested by an independent E.P.A. approved laboratory
- Long lasting, replaceable cartridge, 3 times longer than other systems
- Filters 1500 gallons (average life of 1 year for a family of 4.)
- Connects in seconds directly to your faucet, no extra plumbing or tools required. Just unscrew the aerator on your faucet and screw this diverter valve on in it's place.
- Conversion Kits are available to mount under the sink

Own your own premium water system ~~~ use anytime, enjoy and save money!

Special pricing if bought with the Structured Flowing Water – Whole House System by Clayton Nolte. Shipping & taxes are extra.

### Premium 10-Stage Water Filter U.S. Patent No. 6,197,193 B1

#### 10 Stages of Protection Against Major Water Contaminants

**Stage 1** - 100 micron sponge filter. Traps larger solids (sediments) such as rust.

**Stage 2** - 8 oz. of KDF-55. KDF-55 is a patented alloy which removes free chlorine and some heavy metals, thereby prolonging the life of the filter and is an excellent bacteriostat.

**Stage 3** - 10 micron felt pad which removes smaller floating solids and separates the layers, preserving their integrity.

**Stage 4** - 30 cubic inches of ultra fine mesh, superior coconut shell and granulated activated carbon. Granulated activated carbon has long been accepted by the E.P.A. and others as the premier, cost-effective way to remove chlorine, bad odors and color from drinking water. G.A.C. also removes organic contaminants such as pesticides, herbicides, arsenic, mercury and trihalomethanes - a cancer-causing organic pollutant.

**Stage 5** - 10 micron felt pad for fine sediment removal.

**Stage 6** - 7 cubic inches of ion exchange resin which removes lead to below minimum E.P.A. standards.

**Stage 7** - Additional 10 micron felt pad provides an extra buffer against floating sediment of any kind.

**Stage 8** - 7 cubic inch bed of G.A.C. which provides extra protection against cancer-causing organic pollutants.

**Stage 9** - 3 oz. of calcite, a mineral that energizes water & increases alkalinity - naturally. This raises the water's pH and lowers acidity. It increases alkalinity, which many nutritionists recommend.

**Stage 10** - 1 micron absolute depth filter. A filter with a micron rating this small screens out cysts and protozoa, (including Giardia and Cryptosporidium), and gives the filtered water a sparkling clarity.
